

STANDARDS

ENTRE-PRISES is the only organisation to manufacture bolt-on climbing holds which comply with the European Standard EN1176.1 for playground equipment. Five ranges of holds have been specifically designed for use in schools and play areas. The European Standard ensures that products are chemically safe, non-toxic and are ergonomically designed. A number of tests are also carried out to ensure that the risk of trapping fingers, clothing toggles and buckles is minimised.

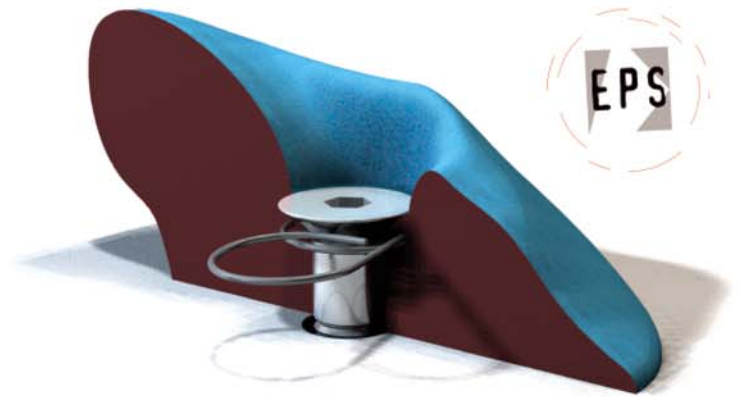

ENTRE-PRISES is the first bolt-on climbing hold manufacturer to be awarded the very stringent TUV certificate of approval, underlining ENTRE-PRISES commitment to safety and quality. The German inspection authority 'TUV', has subjected ENTRE-PRISES bolt-on holds to all its exacting criteria. These tests include: systematic rupture tests, resistance and safety tests, applied forces and freezing / defrosting cycles. Production equipment is audited and certified for each stage of manufacture.

»EXPLOSION PROOF SYSTEM«

(PATENT ENTRE-PRISES)

Security is a good feeling! EPS stands for "Explosion Proof System".

EPS is a proprietary strength and safety device, cast into our holds that the bolt passes through upon installation (see drawing). This ingenious insert is strong enough to even hold body-weight in some circumstances. In the event of an over-tightened hold breaking during use, EPS captures the bulk of the hold which reduces the risk to people below of being struck by flying debris.
