Signs of
Quality

SAFETY

Product design developed alongside with, and supported by, the British Caving Association. All internal interfaces are smooth and snag free. No finger or toggle traps. Additional support elements required if design is not self supporting. Easy to rescue 'stuck' climbers by simply unbolting the connection flanges.

QUALITIES

Customise your own design. Choose the sections, configuration and style of passageway. Construct your cave to meet your space or budget. Great for festivals and events. Purchase new modules to make changes depending on group ability or future needs. Octagonal flanges create 8 different rotation options.

AESTHETICS

Choose your own colour finish both internally and externally. Apply your own branding to the caves exterior. Use as a learning resource for caves and their features. Internal cave paintings and fossils can be incorporated into the design.

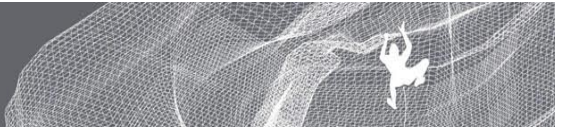

DURABILITY

Caving can be undertaken indoors or outdoors. The system is simple to build and dismantle without damaging the product and there are no complicated connections. Re-configurable designs. Simply take it apart and rebuild it in another shape. Power tools and specialist equipment are not required for assembly. Full 5 year warranty on this product.

MODULAR CAVES

The Options

SECTIONS

- Choose the **'sections'**, this could be dictated by the length you require or your budget.

800mm Straight

90 Degree Bend

45 Degree Bend

3 or 4 Way Entry
(2 types available)

1200mm Straight

STYLES

- Choose the **'styles'**, this gives you the option of creating a truly unique system.

'The Linear'. A passage that offers interesting passage profiles without being too challenging.

'The Chamber'. This can be added to any section to offer some respite. Available in a range of sizes.

'The Arch'. An interesting option, directing the caver to go up and over in order to progress.

'The Squeeze'. A challenging and exciting narrow passage. Can you make it through?

CONFIGURATIONS

- Choose the layout. Sections and styles can be joined in various ways to create many unique **'configurations'**.
